EDUCATION

Riverside City College

Riverside, CA

2023-2026

Associate's for Transfer in Computer Science

Cumulative GPA: 3.7

- Courses taken/taking: CSC-5 (Programming Concepts and Methodology I), CIS-11 (Assembly Programming), CIS-17A (Programming Concepts and Methodology II), CIS-18A (Java Programming: Objects), PHY-4A (Mechanics), PHY-4B (Electricity and Magnetism), PHY-4C (Thermodynamics), MAT-1A (Calculus I), MAT-1B (Calculus II), MAT-1C (Calculus III)
- Recipient of IC3 Digital Literacy Master Certification
- Honorary placement on the Dean's List for the fall semester of 2024

University of Riverside, California

Riverside, CA

2026-2028

Bachelor's of Science in Computer Engineering

Cumulative GPA: N/A

- Recipient of Regent's Scholarship

WORK EXPERIENCE

McDonald's

Corona, CA

Crew Trainer and Food Preparer

Feb. 2022 - Jan. 2025

- Train any new employees, and work as cook in kitchen

PLX and Production Leader.

Jan. 2025 - March 2026

- In charge of preparing the supplies necessary to cook fried, and grilled meats, while also being responsible for maintaining the cooking appliances and positioning workers in most efficient positions. I also correspond with floor managers to plan goals, worker break times, and what may need repairing.

KFS

Corona, CA

Flooring Transporter

March 2026 - June 2026

- Responsible for transporting flooring material (carpet, plank, adhesives, etc.) to jobsites, and removing any demolished materials
- Experience with fork lifts and pallet jacks when moving flooring supplies
- Also did very minimal flooring regarding cove base installation, jobsite walks, and room measurements

PROJECTS

-
- **Ionic Thruster** - Created a working model 3D-printed ionic thruster that produced propulsion by using high voltage, the electrical Corona effect, and a DC variable power supply.
 - **Digital Casino** - Created a console based set of typical casino games that keep continuous track of a player's progress (money), with the use of file IO and two dimensional arrays. Specifically, the typical versions of BlackJack and Slots were recreated with similar rules.
 - **Study Buddy** - Created a console based application that allows its user to create various "flash-card" like sets of questions that can be used to test the user on said material. The user is able to store, add to,

or create unlimited questions within a study vector. The user is also able to delete individual questions within a study vector, or a whole study vector itself.

- **Tic-Tac-Toe** - Created four console based versions of the traditional game of Tic-Tac-Toe, of which the user can choose any one. The four versions of the game involve: Player vs. Player, Player vs. Dumb AI, Player vs. Perfect AI, Dumb AI vs. Dumb AI. The player's progress (like games won, lost, etc.) was also stored using file IO, and was able to be shown to the user, should they request it.
- **DIY PC** - Created a fairly good-quality, PC using a strict budget of roughly \$200 to buy parts on websites such as OfferUp.
- **Traffic Light Simulation** - Using a Raspberry Pi and some electronic components, I replicated the U.S. traffic signal system on a breadboard, in assembly language.
- **GeoTracker (In-Progress)** - Creating an android application designed for commuters that notifies the user when they have reached their destination.
- **Personal Website** - Created my own personal website from scratch using CSS, HTML, and JavaScript showcasing who I am, what I do, and things of that nature.

SKILLS

- **3D Printing** - Moderately proficient in using a 3D-printer, as well as some of the applications used in addition with a 3D-printer, such as TinkerCad and SelfCad
- **C++** - Moderately proficient with the core building blocks of the coding language C++
- **Unity** - Familiar with certain features of the game/app designing application called Unity
- **Arduino** - Very minor knowledge and experience with an R3 Arduino and its functionality
- **Android Studios** - Moderate knowledge and experience with the app developing tool Android Studios
- **Java** - Very limit proficiency with the Java coding language
- **Assembly** - Very minor experience with assembly language through the use of an Raspberry Pi 4
- **Circuits** - Very minor experience with circuits using Raspberry Pi 4 and Arduino
- **Bicycle Maintenance** - Moderate knowledge regarding bicycle repairs on my 2010 Fuji newest 1.0 road bike: specifically tire/tube changes, chain and cassette replacing/oiling, brake pad adjustments/replacements, pedal changes, and derailleur adjustments.
- **Blender** - Very minor knowledge and experience with Blender's modeling features
- **CAD** - Familiar with some 3D modeling programs like Blender, TinkerCad, and SelfCad
- **Fork Lifts** - Have experience moving heavy pallets and carpet rolls with a traditional, propane-powered counterbalance fork lift
- **Pallet Jack** - Have experience moving heavy pallets with a manual, hydraulic pallet jack
- **Microsoft 360** - Proficient experience with all Microsoft 360 applications, largely knowledgeable with Excel, Outlook, and Word
- **Google Workspace** - Proficient experience with all Google Workspace applications, largely knowledgeable with Docs, Gmail, and Sheets
- **HTML** - Moderate experience with creating webpages
- **CSS** - Moderate experience with customizing webpage attributes
- **JavaScript** - Moderate experience handling backend features and functionality with webpages
